

Smart Cooking

Addressing the demand for cookware, kitchen tools and kitchen appliances which makes cooking faster, healthier, environment friendly and more convenient... Blending the conventional with modern technology.

Changing lifestyles & growing technological advancements are bringing about major changes in people's approach towards cooking. Manual processes are being increasingly replaced with technology, automation and gadgets. Cooking is simply becoming smarter!

Numerous innovations are being introduced in the market every year by manufacturers and brands of cookware, kitchen appliances, kitchen tools and kitchenware to make cooking healthier, hygienic, faster, energy efficient, environment friendly, space saving, convenient and contemporary.

From chopping to grating, food preparation to blending, from food processing to baking, steaming to sauteing, boiling to frying, toasting to roasting, icing to decorating...all kitchen activities are witnessing revolution in materials, processes, convenience and comfort. Automation, nutrition, hygiene, health and environment are the new key words in cooking.

Being at home, working from home, the consumers are today connected with their kitchens as never before. With more demanding hygiene and health standards than ever before, more eating at home than eating out; the consumers' cooking and dining habits are further transforming. Kitchens are set to become more intelligent with smart appliances gadgets and voice assistant. Hygiene and health safety from bacteria at all stages of food storage, preparation, processing and serving are new demands that will drive innovations.

At HGH India 2021 a special Smart Cooking pavilion in Hall 4 will showcase upcoming trends in cooking, cookware, kitchen appliances and kitchen tools that combine new materials and technologies to satisfy the needs of contemporary consumers.
